TAN Test Premium Kit

Industries concerned

- Automotive
- Rail
- Mine
- Construction
- Aerospace
- Defence
- Education
- Oil and Gas
- Chemistry
- Industry
- Analysis service

Method derived from ASTDM D974 standard.

The GESERCO TAN Test Premium kit is designed for determining the oil acid index (AN) on the operation site of the lubricated equipment.

The test is simple and rapid and the kit includes a detailed testing and interpretation guide so that the engineer can make immediate decisions for maintaining the lubricated equipment and increasing its lifespan.

The GESERCO TAN Test Premium Kit allows avoiding the effects of lubricant ageing and oxidation:

- Corroding of metallic components
- Gumming and clamping of lubricated parts
- Production of glaze and sludge in the circuitry

The new, simplified version of the **TAN Test™**, the **TAN Premium**, offers a more economical and less sensitive solution while maintaining high accuracy in lubricant acid number analysis.

The kit includes:

- **TA9210**: TAN1 solvent – 500 ml (2 units)
- **TA9207**: TAN5D reagents – 250 ml (1 unit)
- **TA9101**: 25 ml graduated cylinder with cap (1 unit)
- **SER01**: 1 ml plastic syringe (3 units)
- **DP6177**: 15 ml dropper bottle (1 unit)

Reagents subject to transport restrictions: UN1993 Class 3 / UN2924 Class 3
